I have also posted this topic in the Autocad support forum too: Q: How to extract information from different table with same rows I'm having trouble to design a query to extract the information from different table, I have three table that can have some rows of common information, i need to display the information from that same row. Database structure: TABLE A id int (PK) name varchar email varchar timestamp timestamp TABLE B id int (PK) name varchar email varchar timestamp timestamp TABLE C id int (PK) name varchar email varchar timestamp timestamp Table A have information that i need, and Table B, C and B, C have some information that i need but the problem is they have some records with same names and email in all three table, so i need to display only one information from the same row from Table B,C What is the best way to do this? A: This is a tough

one. Assuming I understand correctly, you can try a query like this: `SELECT A.*, B.Name, C.Name FROM TableA A LEFT JOIN TableB B ON A.ID = B.ID`

#### What's New In?

Drafting Intersections and Drill Lines with the Arc command: Draw complex and irregular lines with the help of the AutoCAD graphics engine. Use curved and angled lines to avoid cutting corners, and connect 3D objects with guide lines. Optimized connector accuracy and placement with the new Connector Editor. Modify connector style, anchor points, and other properties of existing connections. Place new connectors at specific locations. Gain control over the placement, rotation, and scale of connectors. Import 2D and 3D profiles to create new geometries. AutoCAD 2023 is built on the same strong foundation of speed, precision, and ease of use as its predecessor. Improvements include: Performance enhancements and code optimizations to enable faster, more reliable execution and interactivity. AutoCAD 2023 is up to 10% faster than AutoCAD 2019. An updated drawing manager with fewer memory and processing resources, resulting in fewer crashes and more stable performance. New features for report writers to automatically generate workflow

reports for you based on what you are doing in AutoCAD and other CAD applications. Improved cross-platform performance. Cloud integration: Using the cloud, AutoCAD users can access their files from anywhere and at any time. Enable document access, or use document versioning. Add comments, annotations, and color to drawings. Expose comments, annotations, and color as separate layers in 3D views. Collaborate with other cloud-enabled users or via an Internet connection. See comments, annotations, and color in separate layers in 3D views. Automatic Sharing: Control how and when to share your work. You can create a private drawing for others to view. Or share public drafts or share only specific views of your work. Automatic Sharing lets you automatically share your work with other users or to the cloud. Manage how your work is shared, who can access the work, and the level of access for every member. Automatic email notifications let you know when your work is shared or changed. Automatic Data Loss Protection (ADLP): Protect your valuable design assets with ADLP. A smart backup engine reduces the chance of lost data. Back up and restore AutoCAD drawings. Create backup files that you can use to restore designs, including all layers and comments
